```
Welcome to 3Macs Beta 1
==========================
In /help you'll find a (very quick and dirty) doc. You'll probably
learn more by
working with the tool. Just experiment.

Included is an SCC file that should allow you to view scrambled
channels in the
GateKeeper mode of operation (needs a valid smartcard!)
(possibly needs adaption of 0x3C ins & this SCC file will not be able
to startup your decoder in "talk to decoder" operation)

GateKeeper is my name for: fooler, blocker, phoenix, ....
This SCC file will block ALL EMM's or 0x40 instructions, play with
it...

Have fun,
Macdouf

Bare in mind this is a !!BETA!! release:-)
