Why don't we give it a shot. I can supply it to cottle and his merry-men and they will do all the testing and give us the feedback we need.

We need to consider, though, that he might turn to snoopy and HIS merry-men for help. Would that be a problem at your end?

Double benefit - 1) diversion from the NDS systems 2) verification of the secs hack in asia.

Interesting.

The box was supplied by a bad guy working in US3. He wanted to know if my man PRINCE could hack it. He has repeatedly chased up on this ever since to the point it is now a little embarrassing. So I would be interested in anything you can suggest or propose in relation to the box. Anything that is an advantage to us would be good, but can we give any feedback to please the guy in US3 and keep the relationship going.

Hi,

remember you sent me the Malaysian ASTRO (secs) system?

Well - the haifa team have finally decided they are not interested in my logging it...

I would like to use it in or (to divert their attention away from our system)

EUC - hence I do - I want to ease sure with you that there is nothing about the box or card that can trace it back to us... is there?
