Author Topic: the BAT GUYS have a CARD DUMP..
Davel
Senior Member   posted 04-20-99 05:48 PM.

----

why dont we??? It seems simple that the easiest way for the bat people to get them back
up was to do a card dump and get there new key. and when it goes down again they will do
the same...
comments? anyone?.........>

PacMan
Senior Member   posted 04-20-99 09:37 PM

They could have actually paid money to have the card reverse engineered while we were
all playing with our freeware. This happened during changeover on DSS. The east group
worked the H card over while the west played with the F card. However they did it, my
batt is still running.

Blaster
Senior Member   posted 04-21-99 09:23 AM

I don't think they do.
Otherwise they would have true hack not this keybased piece of crap

Beavis
Senior Member   posted 04-21-99 09:46 AM

Blaster you fool. this is how this system runs. they use a possible 2 keys to decrypt
messages - nothing else. dss is different running hashing algorithms. two completely
different ecm styles. there was never anything wrong with the original hacks and
echostar did exactly as anyone would have expected.
so shut up you stumbling fool

Beavis,
Can you tell me this
can they increse to 4 or 6 or 256 diffrent keys??
or they just have space for 2???

Beavis: You're more full of shit than the Oklahoma City truck bomb.
The root of what DSS and Echostar do is EXACTLY THE SAME. In both systems, the IRD sends
a request to the CAM for information that will be used to decrypt/decode the video. In
both systems, the CAM either returns the correct information or not, depending on
whether or not it thinks the channel should be viewable. The only difference is in the
algorithm: We know what it is for E*, but not so much for the DSS P2 cards (although, in
the P1 era, we DID know the DSS algorithm: it's what made batt cards possible). The
specifics are irrelevant...whether it's an encrypted key that the CAM decrypts (as with
E*) or a value that gets passed through a hash (as with DSS), the result is the same.
What Blaster is saying is that these wedge-based hacks are second-best and the better
hack is one that modifies the real CAM to always allow video, without regard to the
validity of the subscription. If you're going to mislead people, at least make your
stories plausible, and if you're going to flame people, at least take the time to
understand their message.

axa,
shuttup and listen fool. dss uses a 1 way hashing algorithm to place the bytes of the
stream through to generate a computated control word matching the encrytping computers
results that were used by the mpeg encoder to encrypt video and/or audio if choosen.
they have initiaizliation keys for their algorithms but it is not how they perform ecms
on you. they change how many times or values put through the algorithm you foolishjerk.
echostar has 2 jkeys to choose from to simply decrypt the 2 control words given in a
block. echostar is the d2mac of the usa. dss is the sky of the uk.
shows you how little you think you know loser! go sit in a chair

[stuntguy is axa in hiding. informant to dtv]

StuntGuy
Senior Member   posted 04-21-'99 11:06 AM

Beavis: Okay, moron, let's look at how it works, step-by-step (because that seems to be the only way you'll understand it):
Generic:
IRD provides CAM with info so CAM can compute decrypt/decode info

CAM decides whether to provide info, and if happy, performs necessary steps to compute decode info

IRD requests decrypt/decode info from CAM

CAM returns info or "no go" to IRD

DTV:
IRD sends CAM seed key info, which includes tier info and hash input value using 48 42 packet

CAM examines tier info. If tier matches a subbed channel or PPV entry, CAM feeds hash input value into 3-way hash function

IRD requests seed key from CAM using 48 54 packet

CAM returns result of hash function of "no go" to IRD

E*:
IRD sends CAM encrypted control words and tier info using 03 command

CAM decrypts info in 03 command using one of two keys, decides if IRD is authorized to view channel specified in tier info. If so, CAM re-encrypts control words using IRD box key

IRD sends CAM control word request using 13 command

CAM returns re-encrypted control words or "no go" to IRD

Does that make it clear enough for you? I'm not saying that E* and DSS attack hacks the same way, I'm saying that at their root, both cards work the same way to provide video decoding info to the IRD. The type of attack E* or BSS will levy against a hack doesn't matter, and the fact still stands that a properly implemented CAM-based hack is ALWAYS going to be better than a wedge-based hack. Like I said, READ THE MESSAGES before you respond.

_____

_____

You're right. It's not. What's wrong is the fact you posted the message in the first
place. Blaster wasn't saying ANYTHING about how the E* systems work. By "key-based piece
of crap", he means, "wedges that will go down as soon as E* changes the key again". Your
attack was not called for and counterproductive. I don't know who the hell pissed in
your cheerios to make you so bitter, but I'd suggest that you go take a nice, long
vacation and learn to relax a little: I've not seen you post a single constructive
response here. The best-case for your messages are the ones that you represent as
containing portions of the new key (which may or may not be a falsehood), and you even
manage to call everyone fools and losers in those.

funny, nothing needs to be said.. i found something in something whereas i can recover
the key. i wont say how i found it and it may not have come out of a real cam. I will
let you continue to run the show since you already know you are a gineua pig in this
scene. its not dss where the once you have a working devices code, you are good forever.
we missing other vital pieces of code for sure. you dont have nor echoman aka satcom.
ahahaha you know it too, thats why i laughing the hardest! you know you dont know the
key. if you do, it took you long enough!?

alls quite now i know many have tried to dump the card but its damn near impossible.it
would be the only way to keep up with key changes.it would however keep johny sat
down.some one needs to go work for e* for 1 week and bring out the secret!!!

Dave1
Senior Member   posted 04-22-99 07:21 PM

----

what about the original doc. from the SCP, If I am not mistaken there was suppose to be
some info (not all) about some command that would lead to a card dump. I searched the
posts but found nothing. Stuntguy / Beavis am I correct?
