Subject: RE: DR7's ECM-CAM

I don't really understand the problem with his CAM. I understand it's running and it's ol ous Yoni thinks I have given
him some unkillable technology. Well, this is not true. The cam has the exact code as I Melnicks, Ploetners, and the
guy in GA. All of the others are "dead". Something must be messed up on DR7s card. ould he possibly be stuck on
update 1B?
Then since we never resent 1C his counter is ahead? I don't know. I could swap him ou or a v2 of the bg code.. This
would die on your command in the upcoming future. I could say the code was comprimi d and I don't want him to have
any troubles. Remember, he's my eyes and my voice when I am not there (the IRC, NE . He does NOT need my card
to watch the TV.

This brings up Johns question. After everything died and only his card was alive, he g happy and put that on his
screen. He mentioned in the last phone call he advertised it as that on his ecm cam an giggled.. He said, "when
people ask, I simply tell them they are not for sale." Apparently he wrote this to show th people when they say, "T3 alive
for 3 months" that any card not for sale will remain alive..

The safest solution, we scramble. When we begin scrambling, we should implant 8 by s of every known address we
have seen in the field modified. I am going to have some cam's inside irds today for the vent.

Mikey.

Why would DR7 name the CAM you gave him (same tech as the one you gave
Ron)?

If it was still alive, it would be due to missing some of earlier
updates, right?

Unk

John,

I was up when the last ECM hit (quite an effort on my part - it was
#@$ 3:00am in the morning here!) - I was watching DR7 20 minutes
before the attack went off through to 60 minutes after it ended.
The screen didn't even blink for a second - he did not take out the
card and change it to another - within 3 seconds of an ECM coming down
- nor any time after that.

Sorry if it sounds obvious to you. Is this card the same as the card
currently being distributed by that guy up north (The only one left).
Isn't it 'wierd' that DR7 is calling it the big-gun version 1?

Yoni.

I think DR7 and BG are correct and Asher is mistaken.

Subject: DR7's ECM-CAM

Hi John.
DR7's digital corruption site has an 'ecm-cam' which claims to
currently be working with a "Big Gun version 1".
According to Mike - this is the old card which was later sent to Ron
E - also known as West3m v.8.
It should have died.
Mike claims that dr7 keeps pulling the card out.
Asher Arbit says this is impossible because there are no prior
warnings to this ECM.

Maybe this isn't a BG, but then again, DR7 makes it a point to appear
reliable and trustworthy.
What do you think?
