Hi guys. Would you like 1 or 2 Andy of the 'Stinger'? This is a :vice which replaces
your SmartMouse. It allows you to communicate to *any* cam in the /orld. You can write
scripts (a cache of
commands) for it to execute super fast (108ns per instruction) wit the cam and also
houses an SPI bus for "other" types of devices you might have layi ; around. You can
send/receive data inverse/direct convention as well as any etu. Y ι can supply the iso
slot with a 3 different clock options in relationship to the actua host (the pc talks to
host, host comminucates as directed to iso/spi bus). Its a wicked iece tool in which I
have wrote hundreds of lines of c code as well as assembler. It h ; a built in enhanced
6805 architecture as well if you want to write code to download in) it and run standalone
without a pc.

We also have the CAMid which is simular but not the same (fixed c⊥ :k for example, no spi
bus) but has an LCD and a keypad. It is still being developed the jh.

Mike

Here are appropriate pgp keys (in case you don't have them).

Mike is passing through Heathrow enroute to Tel Aviv. He will arι 'e in the morning of
September 2, 2000, American A/L flight 46 from Chicago.

He leaves on BA Flight 165 at 6:10 p.m. on September 2, 2000.

You both should email and communicate. Mike has a thingy and tra: .ng he can provide if
you will allow him to disrupt your Saturday and join him for lunch ιt the Heathrow
terminal (I forget if it is 3 or 4) where he flies out on BA 165 ι. Tel Aviv for lunch at
Heathrow. << File: Andrew P. Coulthurst.asc >>
