Summary:
- SmartSM have published their new prices for loading their E3M patch. It's really expensive so I hope for them it's good and won't fall with the next ECM :) [Ref. 1]
- DishNetHack are having issues with publishing the transmission keys on the web because they change too often. They have set up an IRC channel to publish the keys as soon as they change. AFAIK DishNetHack was the only site providing the current E* keys on the web. It must still be emphasized that using the AVR3 blocker is not given to anyone. It requires some good knowledge of our system and a will to go get the new keys on the Net twice a day or so. The people claiming on the forums that they are using an AVR3 is in proportion not realistic compared to what can be really found in the field. Just my 2 cents. [Ref. 2]
- As expected the hackers on the forums are now aware that their cards have been upgraded. They have also made the link with the update that has been conducted in Spain three weeks ago. Therefore they already have a good idea about the behavior of the upgraded cards. For example they have noticed that the load & dump using the "official" method has been disabled. A warning has been issued concerning the use of TSBK and other programs to dump the cards: they will mark the card forever. Since there is almost no way to determine if the card has been upgraded or not (the revision string remains unchanged), they have to try to dump it... and this will result in a marked card. Mesh isn't it ? But it's just fair game IMO... [Ref. 3]
- DNTHATR, a user of the DR7 forums, has been stupid enough to post the following URL: http://951230632:echo@www.dr7.com/members/showthread.php?threadid=3462
0. Now everybody has his login & password on DR7,... do whatever you want with it, I don't wanna know... [Ref. 4]

Devices' status

DNASP002   : Compromised. Freeware available. Many cards dead.
DNASP003   : Secured. VIP rights in some cards. Cards in blockers
not
            affected by the update.
DNASP010   : Not compromised.
AVR3/blocker: Working (MCG 3.05).

Dealers' status

KoinVizion   : Moving web site.
E3MCards   : Site closed until new ISP is found.
